

# Commercial / Class 8 SPRING BRAKES

JAN 2017

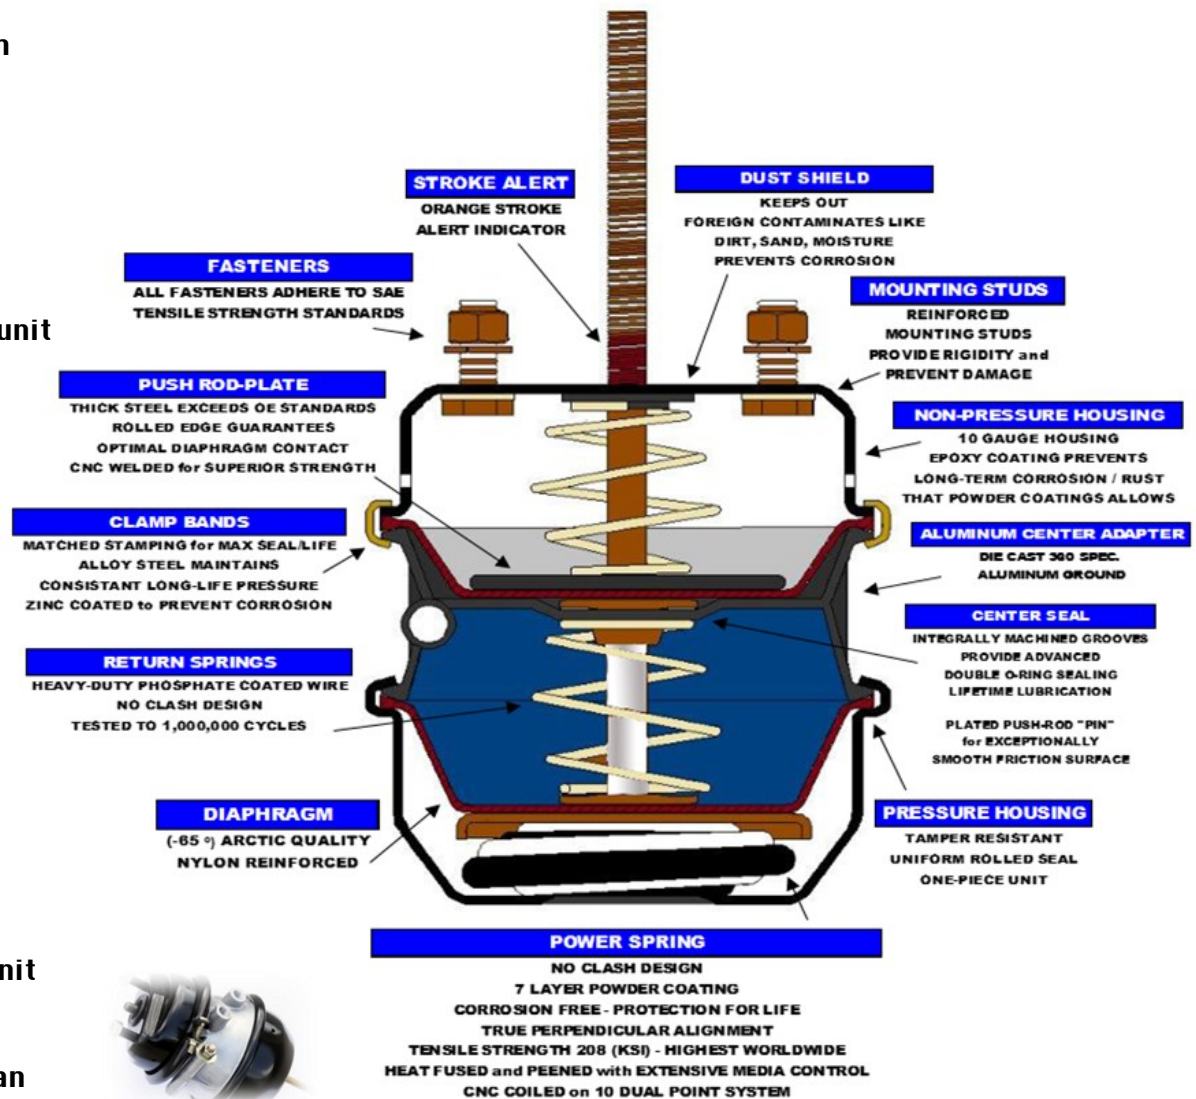

## THE SINGLE BEST VALUE IN TODAY'S COMMERCIAL / CLASS 8 ACTUATOR MARKET

PROLINE\_HD brake's history takes us back over 30 years. We started as a premium engineering company, designing and manufacturing critical parts for NASA to critical braking component parts for HDuty Spring-Brakes. We have engineered and manufactured in-house, virtually every metal component found in a spring-brake. And, don't forget that over the years we have also worked vigorously to perfect our manufacturing techniques.

Our quality is derived from the basic fundamentals of knowing how to design and manufacture each and every component part within an "air spring-brake". As well as understand, how each component piece functions with all the other componentry within the unit. If you're making all the pieces, it gives you a distinct edge over the competition.

PROLINE'S path and strong Engineering has optimized the form, fit and function of our Spring-Brake units resulting in a unit that works flawlessly through extremely harsh environments while keeping you safe during your long roadway passage.

Quality, Value, Performance and the proud fact that Every single unit has been built with the pride and hands of an AMERICAN.
